

# Power Pack

## DESCRIPTION

Powerpack is a powerful additive package specially designed to enhance performance of any mold coating or release agent commonly used by copper smelters for anode casting.

It comes in a white powder format including chemical agents as lubricants, binders, and dispersants. This powder can be added easily to the mixing tank where coating is being prepared.

This product is compatible with mold coatings based in bone ash, barite, alumina or any other release agent based on inorganic chemicals.

We recommend using Powerpack in a 15% weight to weight proportion of the current coating consumption used for preparation.

## BENEFITS

- ✓ Highly compatible
  - Compatible with coatings based in bone ash or barite sulfate
  - Compatible with other inorganic chemical coatings
- ✓ Enhance performance
  - Increase thermal resistance
  - Improve operational tolerance
  - Extend mold life expectancy
- ✓ Easy to use
  - Just add to preparation tank
  - No facility changes required

## SAFETY

- Inert
- Innocuous
- Nontoxic
- Nonflammable

## PACKING

- Bag or Sack 25kg (55 lb)
- 1-ton pallets
- Fiber drum (100 kg)

## APPLICATIONS

- Anode casting
- Ingot casting
